EUChinaGRID Kick-off

Wednesday, 25 January 2006

EUChinaGRID is an initiative to extend the European GRID infrastructure for e-Science to China. The first aim of **EUChinaGRID** will be to facilitate scientific data transfer and processing in a first sample of application areas that have already strong collaborations between Europe and China. These **pilot applications** (**Astrophysics**: the Cosmic Ray Experiment ARGO in Yangbajing, **High energy Physics**: ATLAS and CMS experiments at the Large Hadron Collider, and Biology: **New kinds of Proteins**) will immediately profit of the new infrastructure, and will be subsequently regarded as the driving force to test and deploy an effective grid infrastructure between Europe and China.
